This document is incomplete. The external file associated with the glossary 'main' (which should be called glossario.gls) hasn't been created.

Check the contents of the file glossario.glo. If it's empty, that means you haven't indexed any of your entries in this glossary (using commands like \gls or \glsadd) so this list can't be generated. If the file isn't empty, the document build process hasn't been completed.

You may need to rerun LTEX. If you already have, it may be that TEX's shell escape doesn't allow you to run makeindex. Check the transcript file glossario.log. If the shell escape is disabled, try one of the following:

- Run the external (Lua) application:
 makeglossaries-lite "glossario"
- Run the external (Perl) application:
 makeglossaries "glossario"

Then rerun **ETFX** on this document.

This message will be removed once the problem has been fixed.
